

Bypass B2B Check Printing with Payment Optimization

Despite the increased interest in digitization in other areas, B2B payments still rely on paper checks. As a leading provider of customer communications management solutions, Venture Solutions has partnered with ViewPost to offer a solution that bypasses check production entirely, converting supplier transactions into an electronic credit card, ACH, or ICL payment.

Make Supplier Payments Easier While Saving Money

Through our Payment Optimization program, integrating your existing payment processes is easy to implement and cost effective. We coordinate with businesses already willing to convert their payment method and provide the full payment verification information vital to maintaining financial records for you and your suppliers.

You can simultaneously reduce costs from printing checks and generate revenue. If your payments are converted into electronic cards, the credit card company will send you a rebate payment for bringing the transaction to them.

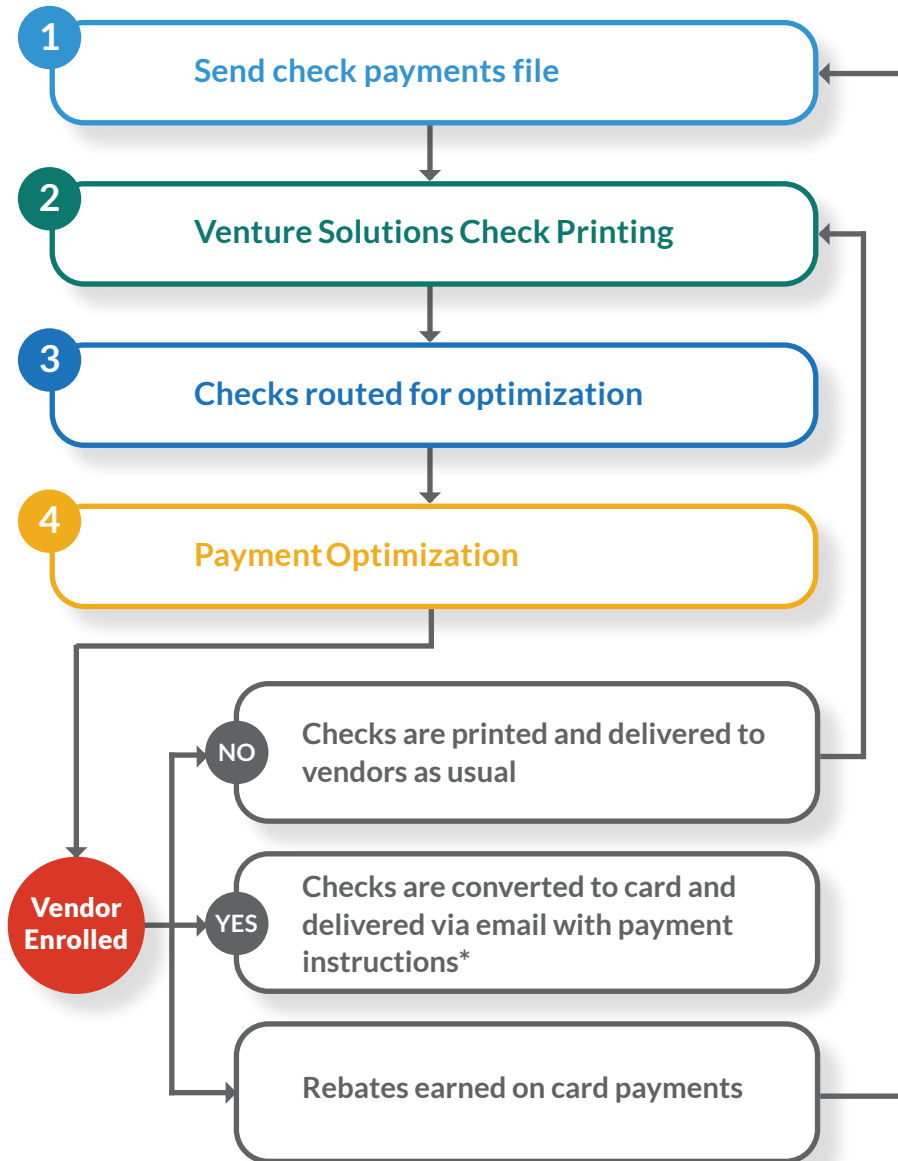

Benefits for You:

- New payment methods for suppliers
- Enhanced payment security
- Rebates for transactions converted to electronic cards
- Reduced supplier payment inquiries
- Advanced digital transformation

And Your Suppliers:

- Multiple payment receiving options
- Readily available electronic remittance and payment information
- Email notifications and online access to payment data
- Funds guaranteed via Visa/Mastercard networks
- Faster receipt of payments without check mailing or processing delays
- Interactive voice assistance for support

How It Works

*For vendors requesting assistance processing payments by phone, via interactive voice response systems, or through payment portals, customer service agents will assist to ensure card payments are processed efficiently.
