

TransForm™

Make form management faster and more efficient while improving NIGO metrics.

What Is TransForm™?

A solution that transforms an underperforming fillable form process into an automated workflow that improves user engagement, collects more accurate data that is easier to process, while decreasing operating costs.

Process Improvements from Start to Finish

Each key phase of forms fulfillment promotes user ownership, processing speed, and automation.

Simpler Process

TransForm™ helps the user find the correct form through an interactive, interview-style experience that leaves the user confident their request will be submitted correctly and increases their interest in completing the form.

Better Customer Experience

TransForm™ guides the user through the form, reducing abandonment rates and improving accuracy. Many companies use existing data sources to complete the “known” information about the requestor, further improving the experience.

More Usable Data

Unlike manually filled forms, which collect and file data away as a PDF, TransForm™ keeps your data accessible and actionable, supporting backend analytics and allowing users to update their forms.

Forms that Benefit from TransForm™
